

Proposed North Delta improvements include modifying and improving Delta Cross Channel gate operations, dredging and/or setback levees on the Mokelumne River, and creating additional floodplain, wildlife, and fish habitat. CALFED also will study and evaluate a screened through-Delta diversion facility on the Sacramento River with a range of diversion capacities up to 4,000 cfs. Actions in the North Delta are to improve steelhead and salmon survival ability, and improve water quality and water supply reliability. The Department of Water Resources (DWR) and USBR will co-manage conveyance program actions.
